| <i>Intended Use</i> | Microbiological Reference Material | |
| <i>Instructions for Use</i> | Store unopened material at 2°C - 6°C protected from light until used. Use aseptic technique at all times. | |
| | Accurately weigh a minimum of 10 g of powder and prepare a working solution using Peptone Water or Butterfields Solution. While the most common dilution is 1:10, any ratio can be used to yield desired counts. The presented powder is ready-to-test. | |
| | Mix thoroughly before testing to resuspend settled product. Materials must only be used on the day of preparation. Once prepared, materials must be stored at 2 °C - 6°C protected from light. | |
| Values quoted in this certificate do not apply when the reference material is used in a manner contrary to the instructions. Values quoted have been statistically verified using the instructions described above. The specified volume in the instructions is the minimum sample size required to yield the defined quantitative parameters. | | |
| <i>Date of Certification</i> | January 9, 2026 | |
| <i>Certificate Expiry</i> | April 17, 2026 | This material will be recertified after this expiry date. |
| <i>Product Expiry</i> | March 5, 2027 | |

Certified values and their uncertainties

Tests were conducted on:

Data was log transformed prior to applying statistical processes. The assigned value is the average of results on the declared day of test. The expanded uncertainty of the assigned value is based on the combined standard uncertainty in accordance with ISO 17034 (where $k = 2$ is the coverage factor for 95% confidence). The lower limit takes into account the expected decline of the microbe levels over the certification interval. These have been calculated using all factors as described in ISO 17034.

5 replicate data points were used to generate this certificate

Results are expressed as cfu/g of material that is "ready-to-test".
